

## **SIL LOGISTICS DIRECTORS SYMPOSIUM 9th RAILWAY CONFERENCE**

**Thursday, 20<sup>th</sup> June 2013**

**SIL 2013, CZFB ROOM,**

**Hall 8. Montjuic-Plaza España Exhibition Center - Fira de Barcelona**

### **“New trends in Rail Freight Rolling Stock”**

The environmental challenges and the required logistics costs reduction are the key issues in order to promote the rail freight transportation competitiveness.

In that sense, the full FERRMED Standards implementation in main EU freight corridors (only 13,000 km in the FERRMED proposal), is one important point in order to achieve the pertinent transportation cost reduction and the corresponding increase of rail share on land traffic.

More rail traffic means a significant reduction in CO<sub>2</sub> and other harmful gasses emissions, but at the same time it is a milestone to reduce, as well, all that concerns noise and vibration.

To accomplish the cost reduction target we need longer and heavier trains, that means to have the appropriate rolling stock that allows to carry 5,000 Tn in a single train, but reducing also noise and vibration.

To obtain these aims simultaneously a new FERRMED freight wagon concept is required.

Furthermore, in railway corridors that are very crowded, some tracks/slippers improvement is required.

In this conference, all the aforementioned topics, jointly with interoperability efficiency, will be duly analyzed by key experts at EU level.
